

# Evaluation

---

1600012947 Kaiwen Sheng

For simplicity, I'll only show a simple topology to evaluate the network, but you can replace that with any topology.

- Open 4 terminals for 4 nodes.
- Enter `sudo ./execNS LABnsID ./main [device type] nsID`
  - `sudo ./execNS LABns4 ./main router 4` for example
  - device type contains: `client` and `router`
- Enter `addDevice [NIC name]`
  - `addDevice LABveth1-3` for example
- Enter `send NIC_name IP_addr message`
  - `send LABveth1-3 230.76.16.0 hello` for example.
